## WELCOME TO THE EPC 2012

Dear Colleagues and Participants,

It is with great pleasure that we welcome you to the European Population Conference 2012 in Stockholm. We are especially honored that we have been given the opportunity to host the 11th EPC, 25 years after the first EPC in 1987.

The special theme of this year's conference is "Gender, Policies and Population". Over the past decades gender issues have moved to the center of demographic research. The persistence of gender differences in health, longevity, and mortality, the gendered patterns of migration, and the increasing importance of gender equality for fertility development in Europe have spurred demographers' interest in how gender shapes demographic outcomes and how demographic development shapes gender relationships. Sweden has been one of the forerunners in Europe to strive for gender equality in all areas of life. Policies have been geared towards promoting equality among all people in society, irrespective of gender, sexual orientation, class, family form, or ethnic or migratory background. In many demographic studies Sweden has become a reference country in examining and comparing the complex linkages between gender equality, policies, and demographic events.

This conference offers a forum to present and discuss research advances in demography, many of which explore the interrelationship between these domains. We hope that this conference contributes to and intensifies the exchange among demographers to further our understanding of the association between society and demography.

On behalf of the International and the National Organizing Committees we express our warm welcome and wish you all a stimulating, exciting, and productive conference.

Elizabeth Thomson, Helen Eriksson, Gunnar Andersson and  
Gerda Neyer – National Executive Committee

Dear colleagues,

The European Association for Population Studies (EAPS) is very pleased to welcome you to the 2012 European Population Conference. This EPC brings together a record number of population scientists from a wide range of disciplines. Participants come from all corners of Europe as well as other parts of the world. We are pleased to see you all here at EPC 2012 in Stockholm!

From the start the EPC has been a general population conference covering a broad range of subjects related to the field of population studies. Nevertheless each conference has also had a special focus. In close consultation with the local organizing team in Stockholm for EPC 2012 “Gender, Policies and Populations” was chosen as the focus. Special attention will be dedicated to this in the opening ceremony as well as in a range of sessions in the conference program.

This is the third conference in a row where new submission records were set. For this EPC we received more than 1,250 submissions from scientists interested to present their work at this meeting. We expect to welcome some 900 participants to the conference. Although the number of submissions and participants has increased, the main format of the 2012 European Population Conference remains largely the same: it comprises a wide range of focused parallel and poster sessions.

The Council of EAPS expresses its gratitude to the Swedish organizing team chaired by Elizabeth Thomson. Together we have worked to make this conference an appealing opportunity for scientific exchange. We look forward to your contributions to another successful EAPS conference and wish you an engaging EPC 2012 in beautiful Stockholm, Sweden!

On behalf of the EAPS Council,

Helga de Valk  
Executive Secretary

## ORGANIZERS OF THE EPC 2012

**The EUROPEAN ASSOCIATION FOR POPULATION STUDIES (EAPS)** was founded in 1983. EAPS is a scientific association of individual members and Affiliated Institutions. It is a key network of population specialists from a host of disciplines. EAPS is an international and multidisciplinary forum for population studies with a special focus on Europe.

Demographic developments in Europe as well as the causes and consequences of population trends are a challenging field for scientific study and debate. Scientists from a variety of disciplines are actively engaged in the study of European population trends and future prospects. Since a number of the issues addressed are common throughout the world, not only Europeans take a keen interest in European population. Next to that European population experts are also working in or on non-European countries, including the developing countries. The aim of EAPS is to promote these studies and to foster the co-operation between scientists involved. In addition, EAPS stimulates the interest in population issues among governments, national and international organizations and the general public.

The main scientific event of EAPS is its bi-annual European Population Conference (EPC). EAPS also organizes seminars, workshops and working group meetings in close collaboration with its Affiliated Institutions and other organizations.

A number of activities and initiatives are carried out under EAPS auspices:

- Population Europe: the European Population Partnership
- European Doctoral School of Demography (EDSD)
- European Journal of Population (EJP)

### **Membership**

EAPS is a scientific association of individual members and Affiliated Institutions. Membership is open at low cost to individuals interested or engaged in European population studies. Membership is not restricted to European nationals or residents. All information on how to become a member or how to update your membership information can be found on the website.

Up to date information on activities and population-related information relevant to the members can be found on the EAPS website [www.eaps.nl](http://www.eaps.nl). The website also includes background information on EAPS, the composition of the Council and a listing of publications.

**The STOCKHOLM UNIVERSITY DEMOGRAPHY UNIT (SUDA)** was founded in 1983, the same year as EAPS. SUDA is part of the Department of Sociology of Stockholm University, and it is home to an internationally oriented program of research and training. We offer a multi-disciplinary one- and two-year master's program in demography, a doctoral program in sociological demography, and training in demography through individual courses. These programs are the only comprehensive demographic training programs in Sweden and are well connected with research schools throughout the world.

Our research concentrates on family dynamics – childbearing, partnerships, households – and the cultural, social, economic, and political conditions that underlie them. Most of the work we do is comparative, engaging data from countries throughout Europe and the rest of the world. We are particularly interested in the effects of social policy, gender relationships and attitudes or values on demographic behavior.

**Current main projects include:**

- **Stockholm University Linnaeus Center on Social Policy and Family Dynamics in Europe (SPaDE):** This project focuses on the relationship between social policies and fertility and family dynamics. Policy domains in focus include parental benefits, education, labor markets and conditions of work, and housing.
- **Register-based Research in Nordic Demography (SUNDEM):** This research line is part of the Swedish Initiative on Microdata in the Social and Medical Sciences (SIMSAM). It focuses on family dynamics in Sweden and the other Nordic countries, making use of their population-register data.
- **Family and Working Life among Young Adults in the 21st Century (YAPS):** This research focuses on attitudes, norms, work and family issues of young adults in Sweden. YAPS is a three-wave panel (1999, 2003, 2009) combined with register data.
- **Swedish Generations and Gender Survey (GGS):** SUDA has also taken the lead in organizing the Swedish GGS that is part of the International Gender and Generations Programme. The fieldwork is being carried out in 2012–2013.

SUDA maintains the Stockholm Research Reports in Demography (SRRD) working paper series. SPaDE and YAPS have separate working paper series.
